

And the Sun Was Blue

Project Pitchfork

Light-years apart
And nothing between us
The softest force
Is the most powerful
We're attracted
And nothing can stop us
We're floating towards
The heart of the other

This is what lets the universe breathe
This is what lets the universe breathe

We embrace each other
With all one's might
All boundaries pushed
Until the first light
The disintegration
Of the particle's shell
Lets warmth become heat
In our blazing hell

All what can be
Will be formed in our core
Our love shines upon you
Forevermore
Our love shines upon you
Forevermore

No eyes exist
To enjoy this view
Life's still dead
And the sun is blue

This is what lets the universe breathe

We embrace each other
With all one's might
All boundaries pushed
Until the first light

This is what lets the universe breathe

No eyes exist
To enjoy this view
Life's still dead
And the sun is blue

This is what lets the universe breathe

All that can be
Will be formed in our core
Our love shines upon you
Forevermore
And the sun was blue
