

Inverse Magnification Matrix

...and Oceans

Within the framework, it appears like a spectre
Formula from the great deep outside known bounds
Enhance your floating objects right before our eyes
Reveal our axis as one of the myriads

Bring forth your circular, symmetrical gods
As rays of light begin to shear
Bent like sun rays through the looking glass

Beyond falling skies into the deepest, darkest depths where light rays are scattered by the gravitational well

Magnify
What's hidden behind the veil
Rectify
What's concealed beneath the cloak

Bring forth your circular, symmetrical gods
As rays of light begin to shear
Bent like sun rays through the looking glass

Giant cosmic lens, reveal what lies beyond where light rays are scattered by the gravitational well

Outside the framework within deeper, darker depths
The inverse magnification matrix
There among secrets beyond our grasp
Where axes are revealed as parts of the myriads
