

# Styrofoam

Ashley McBryde

In 1941, a physicist named Ray McEntire  
Rediscovered a method first discovered by Carl Munters  
An inventor from Sweden, you knew that, right?  
Yeah, I looked it up  
Anyway, ol' Ray found a way to make large quantities  
Of extrudent polystyrene in a closed-cell foam form  
That was resistant to moisture

But you and I know it as styrofoam  
Which reminds me, tonight, on my way home  
I need to hit the Kwik Sak  
And for five bucks, I got myself a portable box  
I can fill with ice and keep all my Natty Lights  
Nice and cold  
You gotta love styrofoam

You can cram it down in your flower pots  
Get it in peanut form and fill up a box  
So that the crappy ash tray that your kid made in class  
To send to Grandpappy don't get cracked along the way  
Hey, it's also used to make rafts for the US Military  
I'm for anything that supports the US Military  
Thousands of usages, all kinds of stuff  
And that includes forty-four ounce cups

Styrofoam  
I fill it half way up with Diet Coke  
And top it off with brown liquor  
Now, I'll walk down Main Street and catch me a buzz  
Right up underneath the nose of the fuzz 'cause of  
Styrofoam  
You gotta love styrofoam  
I know I do

Some folks say, "Hey, what about Mother Nature?  
It decomposes so slow"  
I'm no scientist, all I know is this  
Beer I'm drinkin' is so cold  
Thanks to

Styrofoam  
Styrofoam  
Styrofoam

So thank you, Ray McEntire  
Thank you, Carl Munters  
And thanks, Steve (Steve)  
The guy at the Kwik Sak  
Styrofoam  
Styrofoam
