

## SADIST

Banshee

You would rather see me cry  
Than come  
The tears in my eyes  
Are the life in your lungs  
And I still cry for you  
'Cause I just want your love  
Even though you toss me away when you're done

You would rather see me cry  
Than come  
The tears in my eyes  
Are the life in your lungs  
And I still cry for you  
'Cause I just want your love  
Even though you toss me away when you're done

Why do I bleed for you  
On knees you bruised  
Somehow I see the life in you  
I know someone hurt you too  
But that's no excuse  
That's no excuse  
I knew you were poison but I drank you  
Somehow I thought that I'd be immune  
I've brought gods to their knees  
I thought I could change you  
But the signs on the bottle turned out to be true

You would rather see me cry  
Than come  
The tears in my eyes  
Are the life in your lungs  
And I still cry for you  
'Cause I just want your love  
Even though you toss me away when you're done

You would rather see me cry  
Than come  
The tears in my eyes  
Are the life in your lungs  
And I still cry for you  
'Cause I just want your love  
Even though you toss me away when you're done

My body's tired from everything  
My jaw is sore, it hurts to talk  
My soul is tired from begging you  
To see me as a human at all

I knew you were poison but I drank you  
I really thought that I'd be immune  
I've brought men to their knees  
I thought I could change you  
But the signs on the bottle turned out to be true

Why did I bleed for you  
My knees are bruised

Somehow I saw the life in you  
Everything is better without you  
I am so much better without you

You would rather have me cry  
Than come  
The tears in my eyes  
Were the life in your lungs  
I would still cry for you  
If I wanted your love  
But my bruises have healed  
And I hate you now

You would rather see me cry  
Than come  
The tears in my eyes  
Were the life in your lungs  
I would still cry for you  
If I wanted your love  
But my bruises have healed  
And I'm so much better off on my own
