

# Intuition

CNBLUE

Uh come on yeah

I get a feeling that you'll leave me (Don't give up)  
You keep giving me all these excuses (Don't give up)  
Your cold Bye Bye that felt different from before (Don't give up)  
I cannot let you go (Because I love you)

You told me you love me but now, why you say goodbye?  
I cannot let you go like this, never (because I love you)

Don't try to leave me  
With only an excuse

Please don't go go go, Please don't go  
Can you please look back at me just once?  
Please don't go go go, I don't like sad good byes  
Please come back to me, because I love you

Step by step one two three Dipdi daridu  
Long, long times will erase you away  
Step by step one two three Dipdi daridu  
But each day will be a torture for me

I get a feeling that you and I are over (Don't give up)  
You keep complaining about this and that (Don't give up)  
A cold Bye Bye after waiting for the chance (Don't give up)  
I cannot let you go (Because I love you)

This trashy love  
Is hurting me more and more

Please don't go go go, Please don't go

Can you please look back at me just once?  
Please don't go go go, I don't like sad good byes  
Please come back to me, because I love you

Uh Your lips want to say good bye  
Your eyes keep trying to avoid me  
I already know through my intuition (I don't wanna say goodbye)  
Don't say good bye, don't say good bye  
Don't say bye bye, don't go  
Don't leave love and do this to me (Because I love you)

Don't say no no no, don't avoid my eyes  
Step by step, why are you trying to get farther away from me?  
Don't say no no no, I don't like that kind of a look  
I am pleading like this with tears

Please don't go go go, please don't go  
Don't break my heart Don't you break my heart  
Don't leave me, yeah, still loving you

Please don't go go go I don't like sad good byes  
Please come back to me, because I love you.

Step by step one two three Dipdi daridu

Long, long times will erase you away  
Step by step one two three Dipdi daridu  
But everyday will be a nightmare
