

# Boost!

Dan Bull

In the past, the internet  
Didn't have video yet  
Then there came a website  
Called YouTube to make it right  
240p  
Was the size of a video  
And the audio  
Was mono, not stereo  
You could not upload a song  
Longer than ten minutes long  
Then we got a data boost  
New features were introduced

Quality increased from 240 pixels in 360  
And YouTube added an option to watch videos in 3gp  
Hey Hey!  
Netflix, Ustream, Roku and lets not forget Apple TV  
Another data boost  
As we got used  
To browsing audiovisually EE

Suddenly, we're in the realm of HD  
A whole new level of quality  
720p  
And we went from 4:3  
Black bars on the side to full widescreen  
With faster data plans and broadband  
It's like your holding a whole cinema in your hand  
I hope you brought your 3D specs  
So you can see what's coming up next

720p was clearly never sufficient  
So boost of 1080 improve your vision  
Of the screen  
As the videos streams  
Automatic subtitles transcribe your speech  
Vevo, thumbs up, and HTML5  
I can't imagine the size of the disk drives, it's like  
Band width gets bigger every minute  
We need another data boost  
Just so we can keep up with it

The scene's a sea  
Were swimming deep within it  
Singers, streamers, comedians, memers  
Keen  
It seems we're keen to reach the limit  
It's our forte  
Everything that came before  
Was foreplay  
But of course were going to raise the rate to 4K  
With more frames  
Enabling smoother views of your games  
Youtubers are huge news for the new youth  
Old media bequeathing the future an leaving it to you  
I think you know by now what we need to do:  
Boost

Now it's natural that we are  
Becoming compatible with VR  
Caviar  
Running in 8K color space capable of displaying HDR  
360 degrees, it must seem for it to be believed  
It must be heard Just like the world "Skrt Skrt"  
I don't know what that even means  
All I know is everything is getting more excessive  
Every morning I see something that is ever more impressive  
All my messages amassing even faster than I get em  
The progression is so fast that I cannot even get a breath in  
What do you think of the fact  
Bringing the track back from the beginning of rap  
Fresh as cinnamon baps  
And, in the middle of that, Dan's reminiscing about  
Video stats, still managing to kill it with brilliant facts  
He really is fast
