

## Forensic Entomology

Defeated Sanity

The succession on cadavers happens  
IN a fairly predictable sequence  
And can be used in estimating time of death  
If the body has been lying around for some time  
Since insects arrive on the body soon after  
The death to know the age of the animals  
Will lead you to the time of death

After the initial decay  
And your body begins to smell  
Different kinds of insects are  
Attracted to the corpse

After some short time depending on the species  
And temperature the eggs hatches into  
Larvae become restless and begin to wonder

Forensic entomology  
Forensic entomology

Now in the prepupal stage

As putrefaction develops more species arrive  
At the scene when the body is drying out  
Certain mites will be around  
Analyzing the dead insects fauna  
Their graves are human remains  
Can figure where the cadaver has been
