

Supernova

From Fall To Spring

I see you shining from afar
Brighter than a thousand stars
Desire is burning
Our minds are converging now
The universe lives in our hearts

'Cause when we collide
They'll be staring at the sky
See us bursting in delight
Gravitational decline
'Cause when we collide
All the planets will ignite
So the galaxy shines bright
And all they see is our supernova (Supernova)

I saw you shining in the dark (I saw you shining in the dark)
Brighter than a million stars
Our fire stopped burning
Unkind and diverging now
The universe dies in our hearts

'Cause when we collide
They'll be staring at the sky
See us bursting in delight
Gravitational decline
'Cause when we collide
All the planets will ignite
So the galaxy shines bright
And all they see is our supernova (Supernova)

Our lights illuminate the sky
We lose our paths in starry nights
Our lights illuminate the sky (Our lights illuminate the sky)
We gravitate until we die
Until we die

'Cause when we collide
They'll be staring at the sky
We'd be bursting in delight
Gravitational decline
Prepare for the collision
The planets will ignite
So the galaxy shines bright
And all they see is our supernova (Supernova)
