

## Cadaveric Metamorphose

Haemorrhage

Necrotic plasma in cellular decay  
Rotting enzymes, autolysified remains  
Fetid pyosis oozing thru the flesh  
Brooding parasites, ebullition in the dead  
Disintegrated, and decomposed  
As maggot munch-metamorphosed  
Voracious turmoil of starving grubs  
Masticating innards, drinking all the pus  
Devoured carcasses,  
bones is all that left  
Procreating larvs, spawn of death
