

Racing through the atmosphere  
Tiny matter you should fear  
Artificial energy strong and fast  
Colder than hate fix to blast

And as we scan the sky  
We know that we must die  
We dare no to defy - electrify  
And as we race the night  
We know we all must fight  
A force of blinding light - electrify

The flick was switched so many years ago  
A mission for mankind  
Having gone out of control  
A trike back operation  
Of the fortitude we made  
Electrocution of the inventor: immolate

And as we scan the sky  
We know that we must die  
We dare no to defy - electrify  
And as we race the night  
We know we all must fight  
A force of blinding light - electrify

Lightning strikes the atmosphere  
Neutronic power from an outer sphere  
Everything to be blown away  
What is this force that we lead astray  
To splatter us away

And as we scan the sky  
We know that we must die  
We dare no to defy - electrify  
And as we race the night  
We know we all must fight  
A force of blinding light - electrify  
And as we search the night  
We recognize in fright  
Humanity has committed suicide - electrify
