

Recently my life's been so limited and restricted from doing even simple things like, going outside and playing with my children. Of late I have had to resort using my rescue inhaler over three times a day

Take advantage of the great outdoors, take control of your life again, with Zerithromycin Pluralis steroid inhalers. Side effects of Zerithromycin Pluralis can include: bleeding gums, minor skin rash, increased bowel dysfunction, decreased sex drive, impaired circulation, loss of vision and/or hearing, heart attack, stomach infection, heart failure, lung dysfunction, and infrequently, death in patients over 16. If your asthma does not improve after taking Zerithromycin Pluralis steroid inhaler, call your doctor
