

# Super Nova

Saxon

Deep inside the heavens  
Far across the Milky Way  
The star that shines the brightest in the sky  
Is ready to explode

Lighting up the Universe  
Implosion of the core  
Planets turn, planets die  
In this celestial war

Supernova  
Hotter than the sun  
Supernova  
Destruction has begun  
Supernova  
Lighting up the sky  
Supernova  
The planet's turn to die

The shockwaves cross the universe  
Spreading out in mighty cosmic waves  
Four hundred distant light years they will travel  
Before we see that day

A hundred million times  
Brighter than the sun  
Power of the nebula  
The end has just begun

Supernova  
Hotter than the sun  
Supernova  
Destruction has begun  
Supernova  
Lighting up the sky  
Supernova  
The planet's turn to die

Burning star's shattered light  
Then becomes a galaxy's black hole  
Defying laws of gravity  
Pulling all into its deadly soul

From far across the Universe  
We glimpse a dying sun  
Releasing bursts of energy  
Into this cosmic war

Supernova  
Hotter than the sun  
Supernova  
Destruction has begun  
Supernova  
Lighting up the sky  
Supernova  
The sun is gonna die  
Supernova
