

Beyond The Universe

Sophie Ellis-Bextor

Feel the light hit the top
As the sun is coming up
Through our skin, it enters in
Right to the heart of us

We're not tethered to the ground
Not weighed down by any sound
Nothing is around, just dust
Stars, and the rest is lost

I don't wanna waste today
Gravity fades away
Constellations breaking through
Celestial wanderlust

Climb a little cloud
Scale a little breeze
Ride the morning moon
Won't you come and see?
Everything we want
For eternity
Waits for you

Beyond the universe
Beyond the universe
I'll take you there
Take you there

Beyond the universe
Beyond the universe
I'll take you there
Take you there

Galaxies pass us by
All we can do is fly
Falling past the world we knew
All you have to do is trust

And climb a little cloud
Scale a little breeze
Ride the morning moon
Won't you come and see?
Everything we want
For eternity
Waits for you

Beyond the universe
Beyond the universe
I'll take you there
Take you there

Beyond the universe
Beyond the universe
I'll take you there
Take you there

We're soaring through the light

Above the atmosphere
Until we disappear

Beyond the universe
Beyond the universe
I'll take you there
Take you there

Beyond the universe
Beyond the universe
I'll take you there
Take you there

Won't you let me take you there
Won't you let me take you there
Won't you let me take you there
Won't you let me take you

Soaring through the light
Above the atmosphere
Until we disappear
