

# Love Triangles (Adieu To Hypoten-You)

The Gregory Brothers

I know that  $a^2 + b^2 = c^2$   
But I'm afraid  $you^2 + me^2 \neq we^2$   
You took the us out of Pythagoras [paɪ'θæg.ərəs]  
So I turned 90° and walked away  
I had to say

Adieu to hypoten-you  
I've forgotten you  
We were one whole polygon  
But we got chopped in two  
Goodbye to the function of  $u + i$   
You were my cosine  
But love triangles never work  
There's one too many sides  
Love triangles never wooooooooork

I know that  $\pi$ 's digits are never-ending  
But you and I hit our limit, let's stop pretending  
You never let us be equilateral  
I was always secant, so I walked away  
I had to say

Adieu to hypoten-you  
I've forgotten you  
We were one whole polygon  
But we got chopped in two  
Goodbye to the function of  $u + i$   
You were my cosine  
But love triangles never work  
There's one too many sides  
Love triangles never wooooooooork

Someone always ends up hurt  
We'll never be like what we were  
Love triangles never wooooooooork

Someone always ends up hurt  
We'll never be like what we were  
Love triangles never wooooooooork
