

Multiply And Divide

The Soviettes

Put the keys to the car, then they'll know that someone sits inside!
Put a flag on the back, then they'll see you've got American pride!
Keep your eyes on the ground, chemicals gonna keep you from those lies!
Now you're part of the band
That they've got get your peas in a pod and you'll
Multiply and divide!

Go!

Go!

Everybody says when you lose control
This time they'll never wanna fight 'em

Go!

Fuel to the fire I fear sometime
On the pills and these hearts expire

Go!

I take a shortcut So I better watch to much D-I-V-I-D-E

Stop!

Get your head around me
You've got to think about it

Look!

At what's going on around you

Learn! how to think things through
And things that you can do to

Fight!

They'll divide then multiply

Put the keys to the house at the end of the circle then you'll see
That just drop to the plan but you know it makes everybody free
Get up back to the wall to control who you'll talk to who you'll see
You'll be American dream
How's it feel have you got what you want
And you'll multiply and divide

Go!

Straight to the point
And you're lending your voice
Pretending you're standing up
For what is right

Go!

Division on the A.M. multiply
F.M. give it to the best one yet

Go!

And never what you want
And never what you get
And straight to the point to the best one

Go!

I'm taking chopped nuts and remember that's
Too much to D-I-V-I-D-E

Well now that's not exact but the point is that rockers know the thieves
Keep on burning the bridges but It's not gonna get us what we need
Now they're waiting in streets cause what else can we do that'll make them see
No insurance no pill
Not the part of the plan
That you've got that'll multiply and divide

Multiply and divide
(That's right)

Multiply and divide
(Multiply and divide)

Multiply and divide
(That's right)

Multiply and divide
(Yeah)

Stop!

Get your head around me
You've got to think about it

Look!

At what's going on around you

Learn!

How to think things through
And things that you can do to fight

They'll divide then multiply
