Meet The Elements

They Might Be Giants

Iron is a metal, you see it every day Oxygen, eventually, will make it rust away Carbon in its ordinary form is coal Crush it together, and diamonds are born

Come on come on and meet the elements

May I introduce you to our friends, the elements'

Like a box of paints that are mixed to make every shade

They either combine to make a chemical compound or stand alone as the y are

Neon's a gas that lights up the sign for a pizza place The coins that you pay with are copper, nickel, and zinc Silicon and oxygen make concrete bricks and glass Now add some gold and silver for some pizza place class

Come on come on and meet the elements
I think you should check out the ones they call the elements
Like a box of paints that are mixed to make every shade
They either combine to make a chemical compound or stand alone as the y are

Team up with other elements making compounds when they combine Or make up a simple element formed out of atoms of the one kind

Balloons are full of helium, and so is every star Stars are mostly hydrogen, which may someday fill your car

Hey, who let in all these elephants'
Did you know that elephants are made of elements'
Elephants are mostly made of four elements
And every living thing is mostly made of four elements
Plants, bugs, birds, fish, bacteria and men
Are mostly carbon, hydrogen, nitrogen and oxygen

Come on come on and meet the elements

You and I are complicated, but we're made of elements

Like a box of paints that are mixed to make every shade

They either combine to make a chemical compound or stand alone as the y are

Team up with other elements making compounds when they combine Or make up a simple element formed out of atoms of the one kind

Come on come on and meet the elements
Check out the ones they call the elements
