(I find you, I find you)

See, you can hear it now, a call from somewhere
You'll understand everything when you finally reach

It is like the middle of a desert
Before I reach the oasis, your love
This journey is far from over, oh

When our eyes met
Beneath that night sky, we connected
Disagreeing, embracing each other
Separating and then to be drawn towards each other again
Wanna wanna wanna make it shine
Walking forward every time, ah

Scorching hot scorpion, grant my wish
And show me the way forward
Keep on looking, keep on looking hi hi...
(I find you)
I can't even breathe
I'm searching for your truth
Bursting into flames, I will find you
(I find you, I find you)

Glitter glitter shines this horoscope (ya)
Connecting dots monochrome (ya)
When I was young
I painted my dreams and followed them

That day won't just change suddenly
But except when I found out that I loved you, oh

Don't use fate as an excuse... to tie yourself down
You don't know what the future holds
And I'm okay with that
Wanna wanna wanna make it shine
Walking forward every time, ah
(I just love you)

Scorching hot scorpion, grant my wish
The dawn is already here
Keep on looking, keep on looking hi hi...
(I find you)
I don't care if I can't see anything... but you
I want to be by your side, I will find you
(I find you, I find you)

Over night, over night
Over night, over night
Our story will continue, wow
Over night, over night
Over night, over night
Surely, someday I will find you
(I find you, I find you)

Sweet words that derail my path
Having others laugh at your back
The mirage that I can't hold on to
But still, I think I love you, oh

Scorching hot scorpion, grant my wish
And show me the way forward
Keep on looking, keep on looking hi hi...
(I find you)
I can't even breathe
I'm searching for your truth
Bursting into flames, I will find you
(I find you, I find you)

Over night, over night
Over night, over night
Our story will continue, wow
Over night, over night
Over night, over night
Surely, someday I will find you
(I find you, I find you)
